-------------------- Follow the 3 Steps --------------------
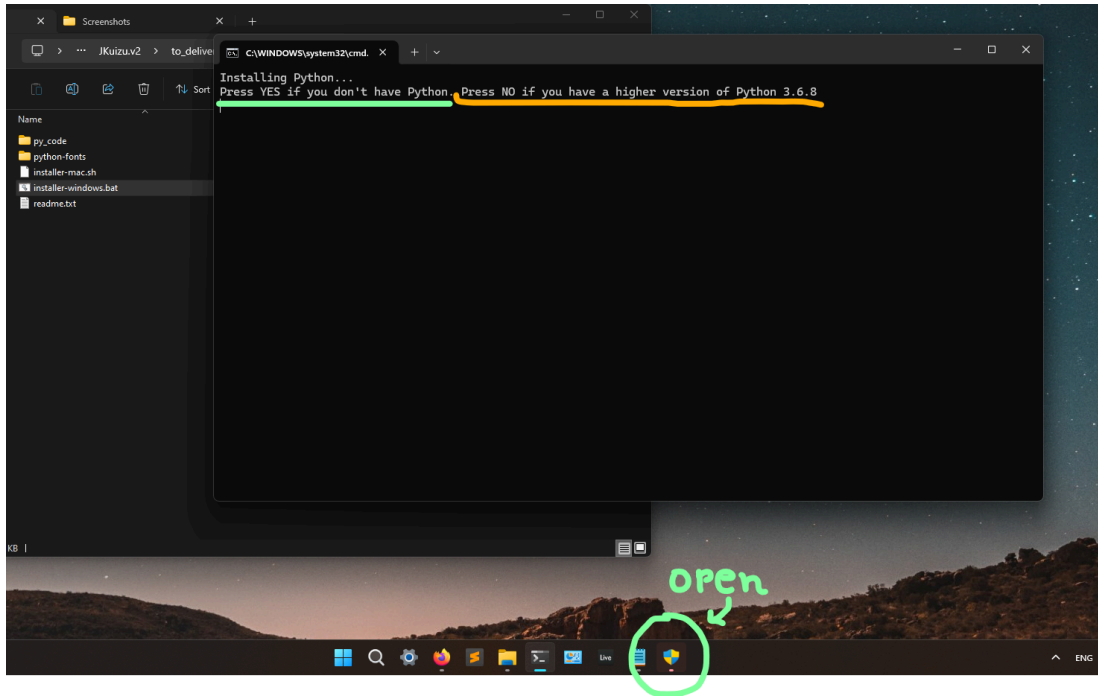

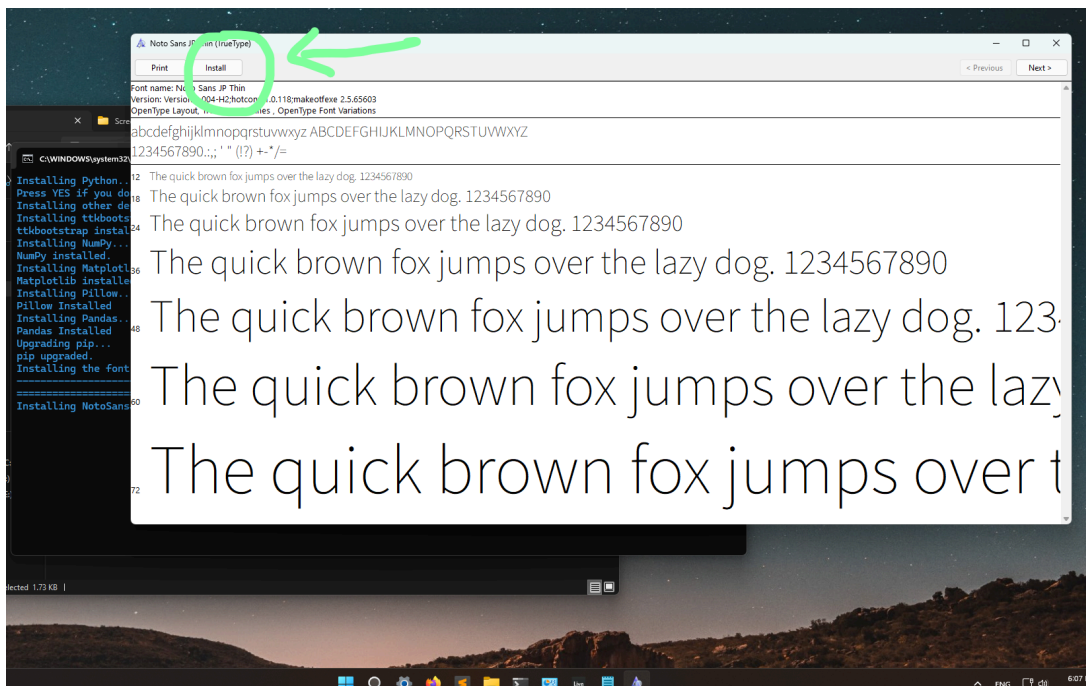

> 1

For Windows: Execute the installer-windows.bat. It will pop another window, click yes if you don't have Python, no if you have a version above 3.6.8.

It will then install python if you chose yes. Wait for it. After that it will install some more and in the end it will pop up the installer for the fonts. PRESS THE INSTALL BUTTON.

After the installation, close the window and go to the terminal window again and press any key for the terminal to close.

For Mac: Execute the installer-mac.sh.
This will install the python libraries and the fonts needed for the script to execute correctly.

———————————————— To update to the latest quiz data ——————————————

For Windows: inside the py_code folder, execute the update-quiz_all_data.bat to update the quiz data to the latest chapter (right now it is on the 8th).

For Mac: inside the py_code folder, execute the update-quiz_all_data-mac.sh to update the quiz data to the latest.

—————————————————————————————— To Play ^_^ ——————————————————————————————

Enter the py_code folder and locate the JKuizu.pyw file.

For Windows: Right click the icon > Open with (Select Python program to open the file from the Choose another app if it doesn't show up)

Double click and run.

Extra: Create a shortcut if you want (right click > create shortcut) and place it on your Desktop or elsewhere. (make sure you do not move the original files from their directory - only the shortcut).

For Mac: Click on the icon.

Press command-i to open the "get info" window. Expand the "Open With" section (if it isn't already).
Choose "Python Launcher" from the drop-down menu.
Click "Change All" if you would like ALL Python scripts to launch when double clicked.

                Double click and run.

!!! Make sure you do not move or delete the original files from their directories(folders). ***!!!***

Enjoy :)
